

3x9x302 Conversion kit for Haflinger Swiss Armees distributor

Information on the Haflinger Swiss Army version distributor:

Many Armies have used fully protected distributors for their petrol vehicles, which has the following advantages:

- makes them water tight
- makes them shielded.
-

But this comes with disadvantages as well:

- The parts are very expensive (Bosch spark plugs costed over a 150 Euro each and that was ten years ago.
- Anyhow most of them are not available (distribution caps, new candle plugs)
- Setting the ignition is difficult (no stroboscope flash, no test lamp as it is protected)

Every owner has to decide whether they want a 100 percent military vehicle or a problem free Haflinger. For the second group we have developed this conversion kit.
